

We are working with NZTE and looking at two activities.

Singapore Aerospace eXchange 2013 from 27 Feb to 1 March 2013

This will primarily be about supply chain engagement, meeting the companies based in Singapore and exploring ways in which to work with them. There are opportunities to work with companies that are manufacturing in Singapore, and with Singaporean companies that are engaging with the wider ASEAN region. More information will be available later in October.

Indonesia

The aviation scene in Indonesia is changing rapidly as the regulatory environment improves, airlines expand, new airlines are created and airport infrastructure investment takes off. We also expect to see helicopter use expand considerably. A wide variety of opportunities are arising, and there are ongoing talks at Government to Government level which support closer commercial aviation engagement with Indonesia. Some research may be undertaken to prepare for a follow up mission. More information will be available at the end of the month..
